Hello! I am Junhyuck Jang, 2D Character Artist from South Korea.

Thanks for buying my character asset!

<Package Dependencies>

This asset is made by Unity '2D Animation' Package. It is skeletal animation tool using 2D sprites.

If '2D Animation Package' and '2D PSD Importer' are not installed, Unity will show error message.

- Unity version: 2019.4(LTS) (Try on this Unity version if error occurs)

- 2D Animation Package Ver 3.2

  https://docs.unity3d.com/Packages/com.unity.2d.animation@3.2/manual/index.html

- 2D PSD Importer Ver 2.1

  https://docs.unity3d.com/Packages/com.unity.2d.psdimporter@2.1/manual/index.html

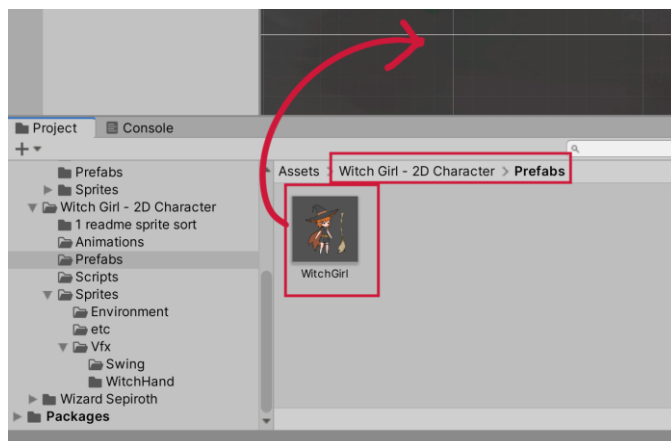

(You can check your Unity Package Versions on top Menu bar- Windows – Package manager)
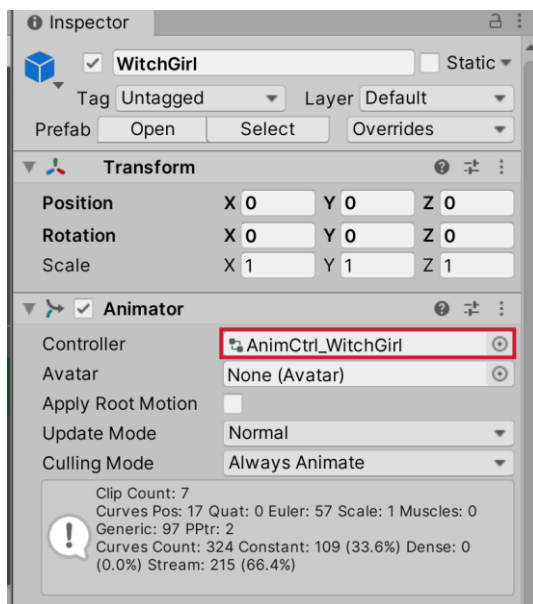

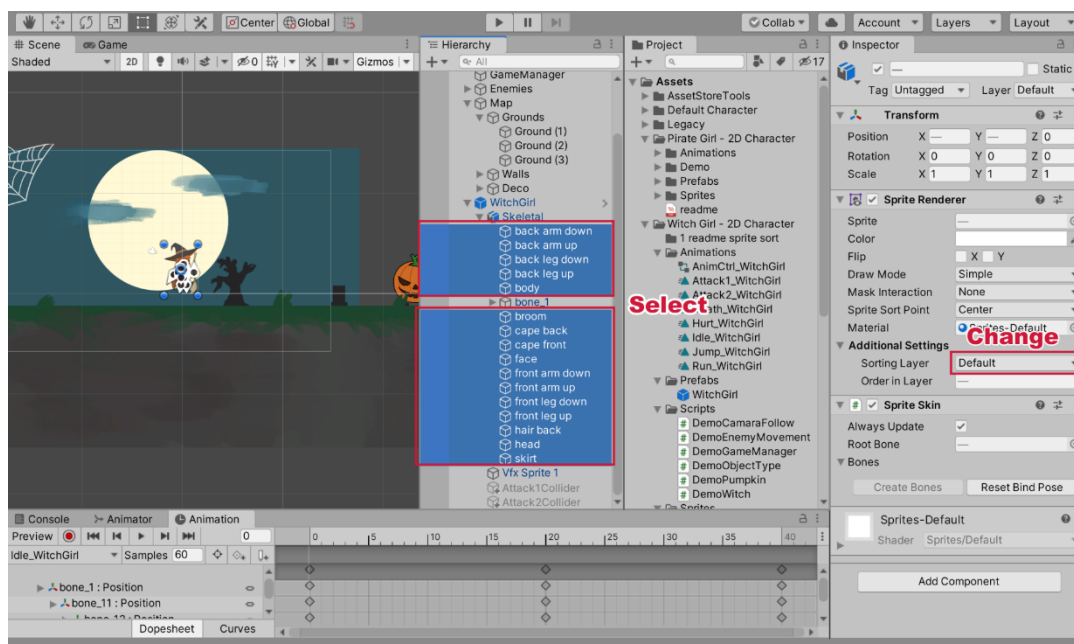

Make sure that these Unity Packages are installed.

<How to use>

1. Drag the prefab in to the Scene

2. Edit or replace the 'animation controller' According to your C# Script.

<Sprite Sorting Layer Change>

<Animation Controller Tip>

Set 'Transition Duration' to 0sec. (If 'Transition Duration' is not 0, the animation is blended)

Set 'has exit time' to Zero.

Uncheck the 'has exit time' for the transition from Looping animation like Idle.

Check the 'has exit time' for the transition from Non-Looping animation like Attack.

(If 'has exit time' is checked the transition occurs after the end of the animation cycle)

<Making new animations>

Press record button in animation window.

And just move and rotate the white bone gizmo.

(If animating is hard, observe my animations.

Observing hand-drawn animations on the internet also helps.)
